TruthFirst Media - DAO + Foundation Structure

Purpose

Define the legal and governance framework for the TruthFirst ecosystem, using a hybrid model of DAO, LLC, and Foundation for operations, transparency, and legal protection.

Entity Architecture

- TruthFirst Media LLC Operates all content, merch, and platform IP.

- TruthFirst Foundation Accepts donations, manages investigative grants, and holds legal fallback infrastructure.

- TruthFirst DAO Token-based governance of key funding and decision-making through $ANTY.

DAO Governance Powers

- Vote on reports to fund.

- Elect contributors or advisory panels.

- Approve or reject project spending (grants, bounties, upgrades).

- Manage community honors (Shifty of the Week, Cazado board).

Foundation Role

- Operate bank accounts and crypto multisigs.

- Distribute fiat donations to real-world contractors.

- Protect the project from censorship or centralized shutdown.

- Own fallback IP assets (optionally licensing to LLC).

Jurisdiction Recommendations

- Panama No crypto restrictions, ideal for global donation handling.

- Switzerland Trusted DAO jurisdiction with Web3-friendly tax law.

- Wyoming (DAO LLC) Token-governed DAO wrapped in U.S. LLC.

- Singapore Efficient, Web3-legal entity setup with fiat access.
